

COMPANY PROFILE

ONTRAS is a trans-regional gas pipeline network operator in the European grid system.

On the basis of Cooperation Agreement III, we implement industry-wide standards to realise network access, and we supplement these standards with our own innovative solutions and products. In addition, we take care of specific tasks of balancing group management as a service provider for the balancing group network operator GASPOOL.

We are partners for transport customers, balancing group managers and network operators as well as for biogas producers.

We strengthen our competitive position by means of constant expansion of our national and international cooperations.

With our continuous investment we guarantee the necessary expansion of the transport system, and thus ensure its reliability. Qualified service companies and an integrated quality management system, as per DIN EN ISO 9001, guarantee high-quality servicing, maintenance, and expansion work.

The increasing regulation of the gas market, which leads to profound changes for the energy industry, will continue to represent a major business challenge for us in the future. We will meet these challenges by intensively participating in the meetings of national and European bodies and associations.
